## Successful anesthetic management of a large supraglottic cyst.

Wagh HD<sup>1</sup>.

### Author information

### Abstract

Excision of a huge-sized supraglottic mass nearly obstructing the airway passage is a real challenge to anesthesiologists. Upper airway obstruction due to neoplasm in supraglottic region is traditionally managed by preoperative tracheostomy. However, such a common procedure can potentially have an impact on long-term outcome.

**KEYWORDS:** Awake fibreoptic intubation; supraglottic cyst; upper airway obstruction.
