

## INTRODUCTION

We are pleased to announce 2018 **CME on Prostate Imaging**. This is the second in our series of **“Radiology & Clinico-Pathological Seminars.”**

Radiology is an integral part of a multidisciplinary team. Radiologists need to delve deeper into the pathophysiology of the disease process, clinical presentations and treatment options. Our intent is to bridge the information gap amongst the clinical teams. We invite radiologists, urologists and other physicians interested in understanding prostate MR imaging and its applications. The highlight of the CME is lectures and interactive sessions with a panel of Radiologists, Urologists and Pathologists. It also includes MCQ based “Test your knowledge” module & Quiz.

The CME will focus on the evolving role of imaging in prostate cancer, especially MRI for diagnosis, surveillance, biopsy and treatment planning. We will review Multiparametric MR Imaging and reporting using PIRADS V2, role of TRUS and ultrasound contrast imaging, image guided prostate biopsy and new molecular imaging modalities such as PSMA PET.

We hope after attending this course, attendees will be able to initiate “Prostate MRI Program” in their facility or consolidate currently running program.

Participants are encouraged to send e-posters / papers / case reports. All presenters will receive certificate and prize. **Seats are limited to 100 participants.**
