INTRODUCTION

There have been significant changes in our understanding of prostate, bladder and kidney tumors. Molecular biology and genetic studies have made a change in approach to pathology diagnosis as well as on therapy.

The highlights of this update are:

- Discussion of diagnostic implications of WHO 2016 classifications in Uro - oncopathology.
- The ideal way of grossing radical surgery specimens.
- Slide seminars to discuss all the newer entities, their diagnostic approach, IHC and molecular diagnostics.
- Slide seminar cases will be digitalized and the link will be shared with all the registered participants for preview.
- Multidisciplinary panel discussions which include histopathologists, molecular biologists, oncosurgeons, medical oncologists and radiotherapists will bring out the clinical and therapeutic implications of the histopathology report.
